BRANCH 1 OF 7

Keyword Research

1 **Understand your audience**
What problem are they trying to solve, not just which words they type?

2 **Find seed keywords**
What would a customer call this if they'd never heard your jargon?

3 **Pick your keyword tools**
Which one tool are you using? Difficulty scores differ between tools, so don't mix them.

4 **Analyse search intent**
Informational, navigational or transactional? Does your page match it?

5 **Check keyword metrics**
Volume, difficulty, CPC, trend: which one actually changes your decision?

6 **Select and organise**
Does this keyword deserve its own page, or is it a section of one?

BRANCH 2 OF 7

On-Page SEO

1. **Keyword optimisation**
   Does the page title match how people actually ask the question?
2. **Title tag optimisation**
   Does your title closely mirror the wording of the searcher's question?
3. **Meta description**
   Would someone choose your result over the one above it?
4. **Header tags**
   Is each H2 a real question, answered in its first sentence?
5. **Content optimisation**
   What does this page offer that the pages ranking above it don't?
6. **Image optimisation**
   Is every image indexable, with real alt text, not hidden behind JavaScript?
7. **Internal linking**
   Does the anchor text match the title of the page it points to?

BRANCH 3 OF 7

Technical SEO

1. **Site structure**
   Can someone reach any page within three clicks of the homepage?
2. **Crawlability & indexing**
   AI crawlers often don’t run JavaScript. Is your content in the raw HTML?
3. **Website speed**
   Does the thing a visitor came for load before everything else?
4. **Mobile-friendliness**
   Does it work on a phone, on mobile data, one-handed?
5. **XML sitemap & robots.txt**
   Does the sitemap list only the pages you actually want to rank?
6. **Structured data**
   Does your schema match the text visitors can see on the page?
7. **Fix technical issues**
   Which broken thing is costing you the most, and how would you know?

Muhammad Mehrooz Shafique

BRANCH 4 OF 7

Content Creation

1. **Understand your audience**
   What do they already know, so you can skip it?

2. **Plan your content**
   Does anyone actually search for this, or do you just want to write it?

3. **Create quality content**
   Word count barely matters. What are you adding instead of words?

4. **Optimise for SEO**
   Does your intro state the answer straight away, or does it warm up first?

5. **Use different formats**
   Does this need to be an article, or is it a table, a calculator or a chart?

6. **Update and repurpose**
   When did you last touch this page?

Muhammad Mehrooz Shafique
Co-Founder, Permanent SEO

BRANCH 5 OF 7

Off-Page SEO

1. **Backlink building**
   Would this link send you a customer even if search engines didn't exist?
2. **Guest blogging**
   Are you publishing where your buyers read, or where links are cheap?
3. **Brand mentions**
   Are you counting mentions, not just links?
4. **Social media**
   Social isn't a ranking factor; it's distribution. Who is seeing you there?
5. **Local SEO & listings**
   Are your address, phone and opening hours identical everywhere?
6. **Community outreach**
   Much of your AI visibility comes from other sites. Who recommends you when you're not in the room?

BRANCH 6 OF 7

Analytics & Monitoring

1 **Track website traffic**

In GA4, which single number would tell you this month went well?

2 **Monitor search performance**

In Search Console, are impressions growing while clicks stay flat, and do you know why?

3 **Track keyword rankings**

One tool, one scale, never mixed. Did the baseline move, or the ruler?

4 **Analyse user behaviour**

GA4 reports engagement rate. Are people finding the part they came for?

5 **Measure goal conversions**

Forms, calls, purchases: are you counting leads, or leads that became revenue?

6 **Review and optimise**

What did you predict would happen before you changed it?

BRANCH 7 OF 7

AI Search

1. **Is AI taking your traffic?**
   For most sites, organic search still sends far more visits than AI tools. Check your own data first.

2. **Do you need AI markup?**
   No. Google says AI Overviews run on its core ranking systems: no special files or schema needed.

3. **Where does AI read?**
   AI often quotes from the body of a page, not just the intro. Is every section quotable?

4. **How long should a page be?**
   Does each section answer one question on its own, without the rest of the page?

5. **Cited more than once?**
   Are you answering many related questions, or chasing just one?

6. **How do you measure it?**
   Each AI platform prefers different sources. A single visibility score hides which one moved.
